

Minutes of Meeting (MoM)

Dive Village Website Review & Corrections

Project: Dive Village Website Development & Optimization
Date: 28 September 2026
Prepared By: mKavs Global Tech
Meeting Type: Website Review & Quality Assurance in Google Meet
Attendees: Dive Village Founder Mr. Sanjeev, Dept of CSEA, HRT & GBD of mKavs

1. Course Recommendation Logic & Certification Flow

Current Issue

The course recommendation system is not properly considering the user's certification status and prior diving experience.

Required Changes

- **Scenario A – No Certification / No Prior Experience**
 - Only beginner-level courses should be recommended.
 - Advanced and specialty courses should remain hidden.
 - User should be guided through the correct learning path.
- **Scenario B – Previously Certified Diver**
 - If a diver already holds certification, the system should prompt:
 - ✱ "Would you like to continue your certification pathway?"
 - ✱ "Would you like a refresher course?"
 - Appropriate advanced courses should be displayed.
- **Scenario C – Certified Child Diver (Example: 8-Year-Old Certified Diver)**
 - System should not reset them to beginner recommendations.
 - Age-appropriate advanced and continuation courses should be shown.
 - Certification history should have higher priority than age-based assumptions.

Action Required: Review and rebuild course recommendation logic to ensure certification status, age, and prior experience are properly considered.

2. Book Us Form Redundancy

Current Issue

User contact information is collected initially but requested again in Step 4.

Required Changes

- Remove duplicate contact information fields.
- Auto-populate previously submitted information throughout the booking process.
- Reduce friction during booking.

Additional Requirement: WhatsApp Integration

- Integrate WhatsApp communication after form submission.
- Upon successful submission:
 - Display WhatsApp CTA.
 - Allow direct conversation initiation with Dive Village.
 - Include pre-filled booking inquiry message.

3. Social Media Presence & Integration

Required Actions

Create and link official:

- Facebook Company Page
- LinkedIn Company Page
- YouTube Channel

Additional Issue & Required Fix

Viber contact was provided by the client but the logo is missing and the communication channel is not visible.

Fix Required:

- Add Viber icon.
- Connect provided Viber contact information.
- Verify functionality.

4. Basic Freediving Course Content Issues

Current Issue

Inside Basic Freediving, a snorkeling video is displayed, causing a content mismatch. Additionally, both sections are labeled similarly as "Freediving", creating confusion.

Required Changes

- Replace snorkeling content with proper freediving material.
- Rename and distinguish course sections clearly.
- Ensure course-specific media is displayed.

5. Shawn Review/Testimonial Content Correction

Current Issue

Shawn's testimonial discusses marine wildlife and mixed marine topics inconsistently. It does not align with intended messaging.

Required Changes

- Focus strictly on marine experiences.
- Remove unrelated wildlife references.
- Maintain consistency and professionalism.
- Rewrite review to accurately reflect diving and marine experiences.

6. Airport-to-Airport Section Review

Current Issue

Every page repeatedly directs users to a generic "Contact Us". Airport transfers and travel arrangements require dedicated workflows. Additionally, there is a UI issue with unnecessary numbering formats (01, 02, 03, 04).

Only learn more for personal itineraries.

Required Changes

- Review travel-related conversion flow.
- Create dedicated inquiry actions where required.
- Reduce unnecessary Contact Us prompts.
- **UI Fix:** Remove numbering entirely.

7. Personal Itineraries Flow Correction

Current Issue & Required Change

Slow down clown fish

Personal Itineraries currently redirect users to Contact Us. Redirect users to "**Customize Your Dive Experience**". This provides a more logical and relevant user journey.

8. Gallery Page Review

Navigation & Numbering Issues

- **Navigation Arrows:** Gallery arrows are displayed but do not function. Fix navigation functionality or remove arrows entirely if not required.
- **Numbering:** Gallery uses 01, 02, 03. Remove numbering.

File Naming & Duplicate Content

- **Filenames:** Internal filenames (e.g., BOOK US 360 BACKGROUND) are visible. Replace internal file names with professional titles. User-facing content should never expose development asset names.
- **Duplicates:** Gallery Videos 3 and 4 are identical. Remove duplicate content and replace with unique media.

Media Library Quality Review

A large portion of media assets are incorrectly labeled (e.g., Ocean-related title displaying unrelated elephant footage).

Required Changes:

- Audit all 136 assets.
- Correct naming conventions and match titles with actual content.
- Prioritize highest-quality content at the top.
- Remove numbering hierarchy.

CTA Update

Replace the current "Contact Us" CTA in the gallery with "**Shop Merch**".

9. Shop Merch Improvements

Required Changes Remove View All from you may also like

- **Background Enhancement:** Add a secondary promotional video behind merchandise section branding.
- **Product Variant Display:** Remove product type naming (Type A, Type B). Display sizing only (e.g., S-M, L-XXL).
- **Product Viewing Experience:** Products cannot currently be enlarged. Implement product zoom, a product modal/lightbox, and detailed product preview.
- **Product Information Correction:** ~~Add~~ UPF 50+ specification and sun protection benefits to apparel descriptions. Remove
- **Recommendation Section:** Inside "You May Like", add **Cap** and **Dive Bag** as additional merchandise recommendations.

10. Night Mode Visual Adjustments

Issue: Diver halo/glow effect is excessively bright.

Required Change: Reduce brightness, improve visual balance, and maintain readability without overwhelming the design.

11. Marine Life Video Sequencing

Issue: Content order does not follow the approved sequence (Box Jellyfish was specified to appear first but does not).

Required Change: Reorder media according to approved storyboard and ensure Box Jellyfish appears first.

12. Mobile Optimization

Concern: Dive Village mobile experience requires further optimization to deliver a smooth experience across Android and iOS devices.

Required Areas of Review:

- Performance and Loading speed
- Responsive layouts and Media compression

- Touch interactions and Navigation usability
 - Gallery performance and Merchandise browsing experience
-

Summary of Key Priorities

High Priority

- Course recommendation logic overhaul.
- WhatsApp integration.
- Social media creation and linking.
- Gallery audit and media corrections.
- Mobile optimization.
- Shop Merch improvements.
- Airport-to-Airport workflow correction.

Medium Priority

- Night mode refinements.
- Testimonial content correction.
- Freediving content corrections.
- Viber integration.

Quality Assurance Required

- Full media audit, naming convention review, and duplicate content check.
- CTA consistency review.
- Mobile responsiveness validation.
- Final user journey testing before deployment.

Meeting Conclusion: Significant UX, content accuracy, media management, booking workflow, and mobile optimization improvements are required before final acceptance. All identified issues should be reviewed, corrected, tested, and presented in the next review cycle.
